# MT. WILSON RADIO TOWER

Last year, Bragg Crane Service removed and replaced a broadcasting antenna for KCBS-TV/FM on the top of Mount Wilson outside Los Angeles. A unique job with a great view, the team utilized a Liebherr LTM 1400 with 220,500 pounds of counterweight, 253' of luffing jib and 118' of main boom with a y guy assembly to complete the job. The original tower that was being replaced was built in 1986 and served as an essential piece of Los Angeles television industry, broadcasting shows all over Southern California for over 30 years. Upgrading this broadcasting antenna continues Los Angeles' television history as well as Bragg Companies' history of safety, integrity, quality and superior service.

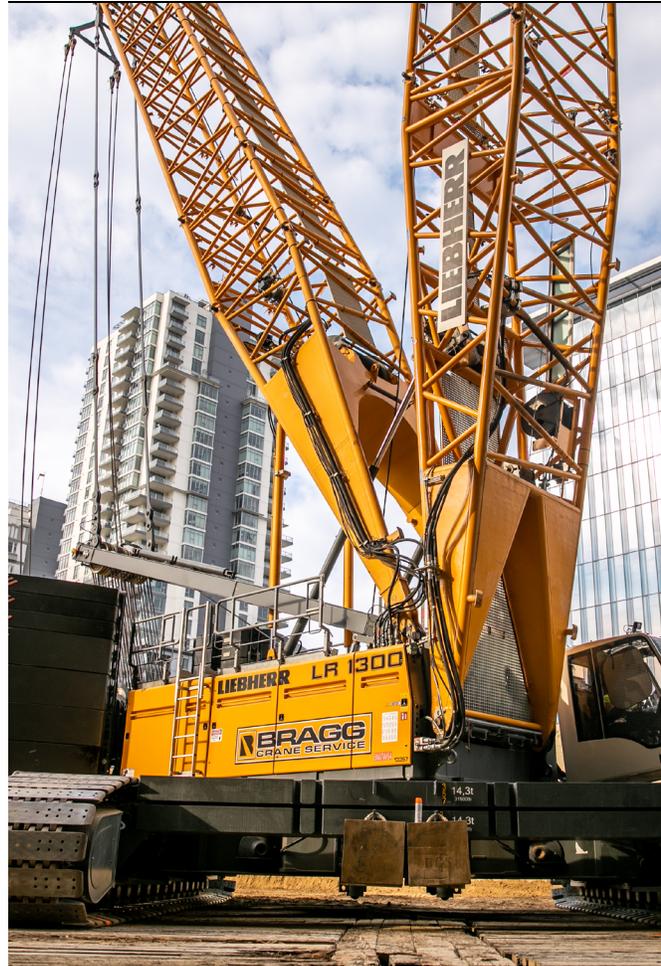

# LONG BEACH DEMOLITION

In the fall, Bragg Companies was hired to demolish a 15 story building in Downtown Long Beach. In such a densely packed area, demolition is a unique challenge, but BCS's team was up for it.

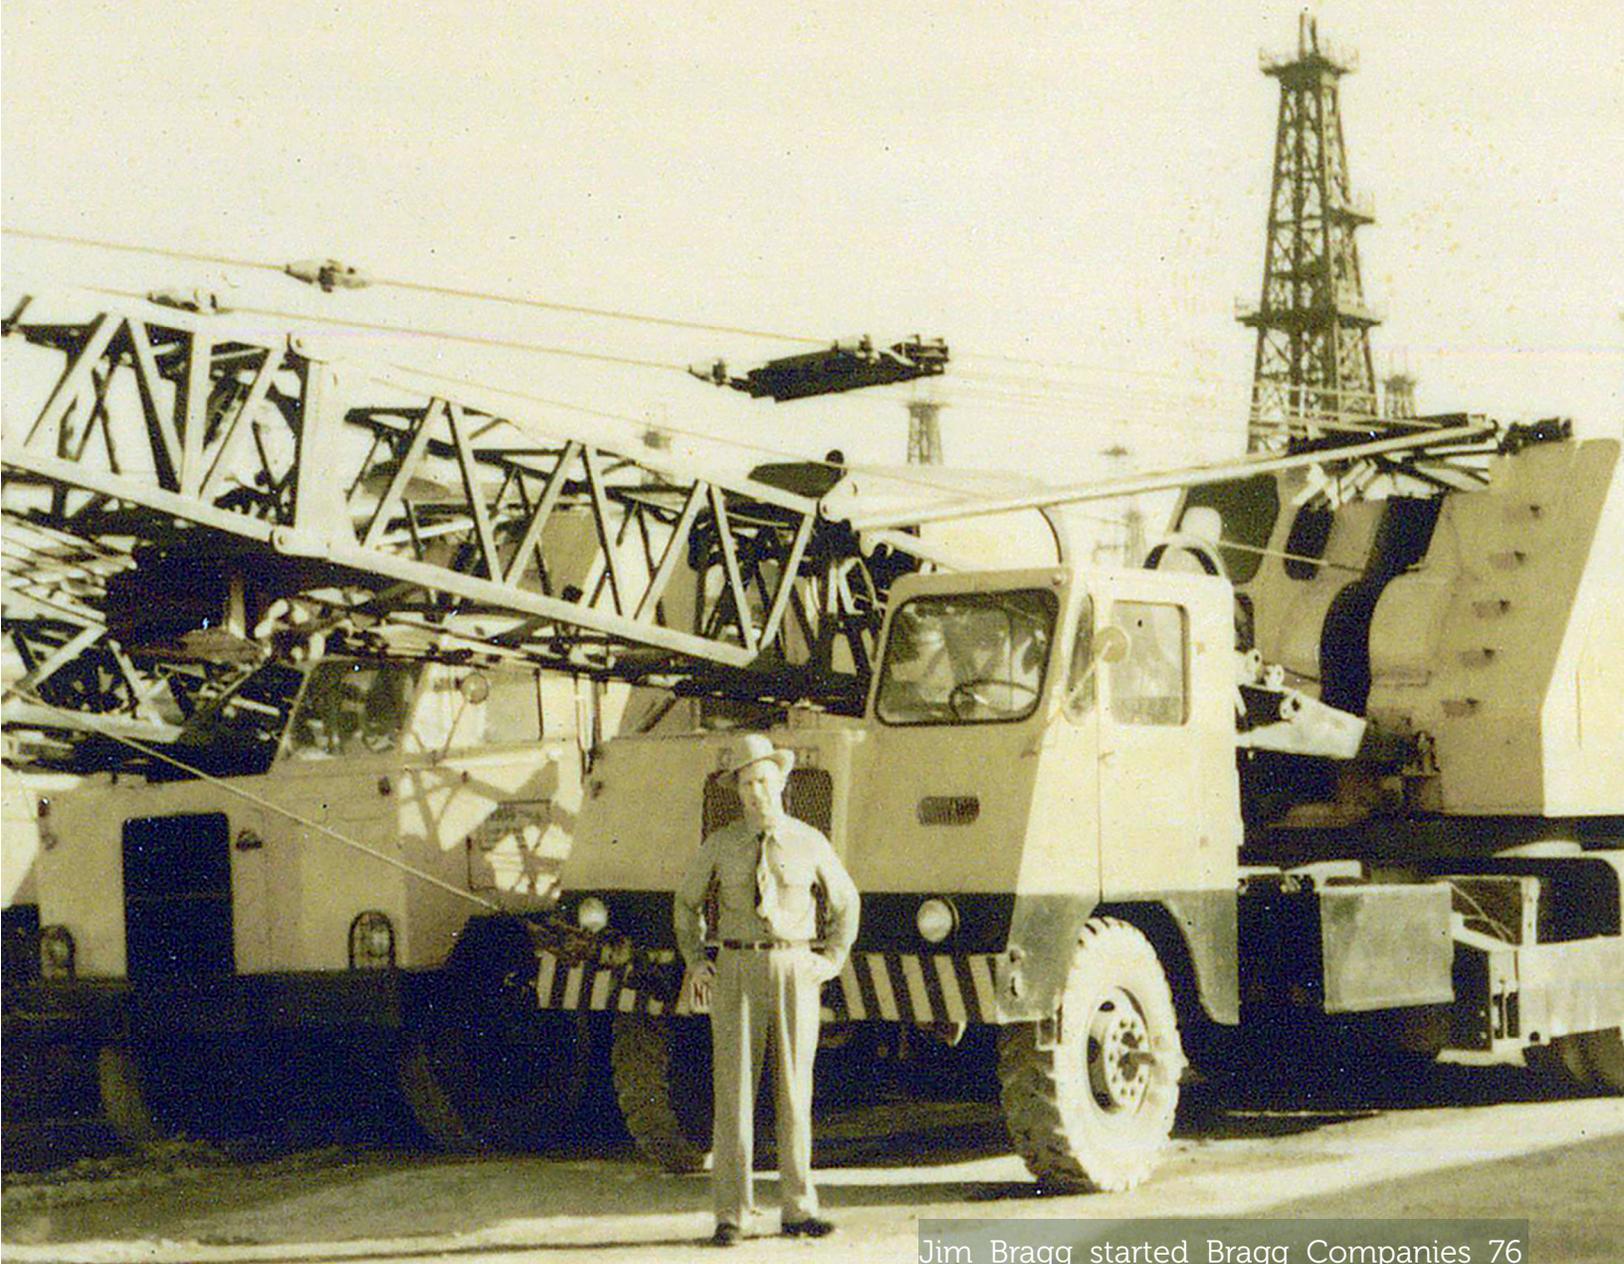

An LR 1300 SX Crawler Crane used used with a 272' main boom and 154' luffing jib along with the derrick and suspended counterweight tray. The crane was set up and then walked up a ramp to finish building the luffing jib in place.

The job went smoothly, with great views of Long Beach in the process. Over the course of 5 months, our team safely demolished the building and made way for new developments in our hometown.

# *Bragg Throwback*

OVER SEVENTY FIVE YEARS OF QUALITY

Jim Bragg started Bragg Companies 76 years ago with just one crane and one truck in the Signal Hill oil fields. Pictured here in 1954, Jim built a business that has spanned decades, expanded to multiple specialties and grown to have offices across the country.
